Summary

Computer Science and Engineering student with a background in software development, core data structures, algorithms, and core CS concepts. Technical experience covers Python development, web development, Machine Learning, and Generative AI, alongside practical skills in security testing, secure code review, and vulnerability assessment for enterprise applications. Capable of building backend systems and analyzing application features within collaborative environments.

Skills

Core Programming: Python Development, C, C++, Java Basics, Data Structures & Algorithms (DSA), OOP
Web & Backend Engineering: Flask Development, HTML, CSS, JavaScript, REST API Integration, Software Architecture
Databases & Environments: MySQL, SQLite Relational Database Management, Linux/Unix Environments, Git, GitHub
Core Computer Science: Operating Systems (OS) Internals, Computer Networks (CN), Distributed Systems
Application Security: Secure Code Review, SAST, DAST, Vulnerability Assessment, OWASP Top 10, Burp Suite

Experience

Oracle
Project Intern, Security Team Jan 2026 – Present

- Worked on application security analysis for enterprise applications through security assessments, secure code reviews, SAST, DAST, and manual testing.
- Identified and validated high, medium, and low severity vulnerabilities based on OWASP Top 10 and secure coding practices.
- Tested issues related to authentication, authorization, JWT validation, session management, input validation, access control, privilege escalation, SQL Injection, XSS, CSRF, and log injection.
- Used Burp Suite for request/response analysis, vulnerability validation, and web application security testing.

Projects

RAG-Based Student Assistant for Academic Resource Access | *Python, Flask, LangChain, ChromaDB, OpenRouter API*

- Built a RAG-based academic assistant using LangChain, ChromaDB, Sentence-Transformers, and OpenRouter API to retrieve resources and generate context-aware responses.
- Implemented PDF ingestion, semantic search, text preprocessing, TF-IDF/Naive Bayes query classification, and a Flask API with HTML, CSS, and JavaScript frontend.

Smart Medication Alert System using Image Processing | *YOLOv8, OpenCV, SQLite, Twilio API*

- Designed a vision-based medication monitoring system to detect missed or incorrect doses using YOLOv8, OpenCV, and SQLite.
- Integrated Twilio API to trigger automated SMS and call alerts, improving patient safety and reducing caregiver dependency.

Website for JNTUH Healthcare Center | *HTML, CSS, JavaScript, Machine Learning*

- Developed a responsive healthcare website with an intelligent chatbot and Telugu voice assistant to support campus health service access.

Education

JNTUH University College of Engineering, Science & Technology, Hyderabad	2021 – Present
Integrated B.Tech-M.Tech in Computer Science and Engineering	CGPA: 9.3
Narayana Junior College, Hyderabad	2019 – 2021
Intermediate Education – MPC	Percentage: 98.8%
DAV Public School, Hyderabad	2007 – 2019
Secondary Education	Percentage: 96.0%

Leadership and Activities

Club Lead, JNTUH Data Science Student Club Nov 2023 – Nov 2024

- Managed operations for a technical student community of 200+ members, driving technical events, core onboarding pipelines, and a competitive interactive chatbot development hackathon.

Workshop Coordinator, QUEST 2024 Mar 2024 – Apr 2024

- Spearheaded organizational logistics for multi-disciplinary technical workshops spanning Cyber Security, Machine Learning, and Web Technologies for over 150 participants.

Certifications & Technical Training

- **Yellow Belt & White Belt Security Expert** – Oracle Internal Technical Qualification 2026
- **AI Security Essentials Specialization** – Proactive Security for AI Models, Attacks & Lifecycles 2026
